Molecular markers for prostate cancer: An update

**Location:** Room Madrid (Hall B2, level 0)

**Chairs:** S. Loeb, New York (US)
D. Sjoberg, New York (US)
G.N. Thalmann, Bern (CH)

**Aims and objectives of this presentation**

There are at least three different sets of molecular markers for the diagnosis and aggressiveness of prostate cancer on the market. Are the currently available data sufficient for clinical use in the setting of active surveillance or clinical decision making for or against adjuvant treatment? This session will present the latest data on molecular markers for prostate cancer. In addition high quality data on conventional prognostic markers will be discussed.

Poster viewing of 20 minutes. Presentations will take place on stage. Standard presentations are 2 minutes in length, followed by 2 minutes for discussion. Extended presentations (•) are 3 minutes in length, followed by 3 minutes for discussion.

**09:08 - 09:18**

**Molecular markers in prostate cancer: What is currently available?**
S. Loeb, New York (US)

**Validation of the novel 5-group Gleason grading system: 3+5 disease risk may be overestimated**
