ESU/ESUT/EULIS Hands-on training in Ureterorenoscopy

Location: Room North America (Hall B0, level 0)

Chair: B.K. Somani, Southampton (GB)

Aims and objectives of this presentation
Ureteroscopy is an essential tool in the management of stone disease for all Endourologists. This course will provide hands-on-training with tutor guided practical tips and tricks of doing ureteroscopy. Participants will get a chance to perform Semirigid and Flexible ureteroscopy in the models with a chance to navigate the pelvicalyceal system, stone manipulation and extraction.

Aims and objectives
• At the end of the course, the participants will be able to perform rigid and flexible ureteroscopy in the models
• The participants will be able to interact with tutors and gain valuable insights into the tips and tricks of basic and advanced ureteroscopy.
